Examiner's Amendment

1. An Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this Examiner's amendment was given in a telephone interview and/or FAX request with Ms. Mindy Ritner on May 21, 2007.

The application has been amended as follows:

- Claim 26, line 7: the number "2.5" was changed to "1.5"; and
 - Claim 26, line 7: the number "15" was changed to "12".

Reasons for Allowance

3. The present claims are deemed allowable over the references of record since the references of record fail to disclose or render obvious a plated magnetic film meeting the claimed structure and/or property limitations.

With regard to claim 1, while the prior art of record disclose plated magnetic films comprising columnar crystals, the prior art of record fails to teach or render obvious a plated magnetic film comprising a plurality of columnar crystals consisting essentially of a plurality of fine crystals meeting the claimed material limitations, wherein the plurality of columnar crystals are adjacent to one another with grain boundaries linearly extending in the film thickness direction along the plurality of fine crystals. Specifically, the Examiner notes that Funayama et al. ('982 A1) disclose that the columnar crystals

Art Unit: 1773

are *individual crystals* and not a plurality of fine crystals (*Paragraph 0161, last sentence*). Similarly, Hiramoto et al. fail to disclose the claimed structural limitations associated with the plurality of columnar crystals possessing linear grain boundaries and consisting essentially of fine crystals.

With regard to claim 26, Applicants have presented evidence that the optimization to obtain the combined property limitations of a center line average roughness of 1.5 nm or less, a coercive force of 12 Oe or less and a saturation magnetic flux density of 2.25 T or more is neither expected, nor obtainable by routine experimentation. As such, the Examiner deems that the claimed structure and properties represent an unexpected improvement over the art due to the obtainment of the claimed property ranges simultaneously. The Examiner notes that Yoshikawa et al. ('892) disclose low coercivity and high saturation magnetization materials formed from CoFe films meeting the claimed crystal and composition limitations (*e.g. Table 5*), but fails to disclose or render obvious the obtainment of the above recited properties while insuring columnar crystals and a surface roughness meeting the claimed limitations. Kawasaki et al. (U.S. Patent App. No. 2005/0011590 A1) disclose CoNiFe films possessing saturation magnetization values up to 2.25 T, as well as low coercive force, but discloses that the films possess surface roughness values greater than 1.5 nm.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
